

CONNECTION CHAMBER

The connection chamber is a compact and modular solution for making implementation easier, regardless of the network type

Main Features

Placed in a parcel, it makes it possible to draw and connect underground telecommunication lines. The thermoplastic telecom connection chamber with fibre glass consists of the following items:

- Black pad with a load bearing capacity of 500 kg
- Tank equipped with two sealing cones
- Easily removable bottom (without tools)

Benefits

- Easy implementation and handling
- Chamber equipped with factory drilled holes
- Equipped with tapered seals (does not require concrete formwork)
- Multiple drilling options
- Easily removable bottom
- Easily machinable
- Weighs less than 5 kg
- Complies with UTE C15-900

Uses

- Infrastructures
- Operators
- Developers
- Public initiative networks
