

OVERHEAD CONNECTION BOXES FOR COPPER TELECOM NETWORKS

Boxes for overhead TELECOM network protection and connections. Custom solutions tailored to client applications and needs

Main Features

- Protection and connection boxes:

Installed at overhead-underground transition points, protection and connection boxes provide protection against surges through grounding and connect overhead cable to an underground cable.

- Distribution boxes:

Fitted to overhead networks, distribution boxes are used to connect subscriber connection cables to the main network cable to create a concentration point.

Overhead boxes are available in various materials (SMC, PVC, polypropylene, etc.) to meet the requirements of our customers while offering the best weather performance.

Benefits

- Compliant operating products
- Custom equipment

Uses

- Infrastructures
- Operators
