

METAL SATELLITE ANTENNAS - STEEL OR ALUMINIUM

Steel or aluminium metal satellite antennas for TV programme reception with excellent image quality.

Main Features

The metal satellite antenna can receive free-access or encrypted TV and radio programmes from one or more satellites with excellent image quality on multiple sockets in a home.

There are two types of antennas in multiple sizes.

- The antenna with the 60 cm to 1 m steel reflector
- The antenna with the 65 cm to 85 cm aluminium reflector

Discover [QUICKSAT](#), CAHORS application dedicated to satellites antennas installation.
