

# INDOOR AMPLIFIERS

---

Indoor amplifier (TNT, FM, Satellite and cable network): boosts the incoming signal for high quality reception

---

## Main Features

The indoor amplifier boosts the incoming signal when it is too weak for high quality reception on multiple sockets in a home.

There are three types of indoor amplifiers:

- Terrestrial only (UHF and VHF+FM bands)
  - Terrestrial on a cable network (with a return channel)
  - Terrestrial and satellite
- 

## Benefits

- Separate amplification level adjustments
  - High output level
  - Compact size and DIN rail mounting capability
- 

## Uses

- Individual housing
