

SERIE 400 COMMUNICATION BOARD

Multifunctional communication boards, centralisation solutions and multimedia network distribution.

Main characteristics

The SERIE 400 is a multifunctional communication board for:

- Connecting electrical products (Optical Network Transceiver, operator boxes, computer switches, TV amplifier, etc.) with its two onboard outlets
- Expanding existing facilities with an additional box
- Mounting the box and managing the cable connection with the provided scratches
- Adding RJ45 sockets in a home (max. 8 sockets)

Its modular and scalable system allows it to integrate into all facilities. This box is ideal for new FTTH Optical Fibre facilities.

CAHORS has also developed a shelf for mounting and securing the operator box in the dwelling's service duct. It is suitable for all boxes on the market. Cables pass through openings on the top and back of the shelf. Tape can be used to hold the box in place.

Advantages

- Integrated 220 VAC sockets
- Perfect strong current/low current insulation
- Ventilated hood for ventilating the active components
- Large openings for cables at the back of the box
- Routing of cables for boxes on the front, bottom, and top
- Various available configurations
- Available equipped or unequipped
- Many accessories, full range

Uses

- Collective residential
- Private residential
