

2 SAT+TER SOLUTIONS

2 SAT+TER multiswitches are used to couple satellite and terrestrial antennas on multiple sockets in order to connect it to satellite receivers.

Main characteristics

CAHORS offers several types of multiswitches with 4 to 32 sockets.

- Standalone, but scalable and cascable to increase and distribute the number of outputs
 - Standalone with a configurable active/passive terrestrial input
 - Optical for an optical fibre distribution instead of coaxial cable
 - Ethernet with an RJ45 input in addition to satellite and terrestrial inputs
-

Advantages

- A solution tailored to every situation
 - Our estimate and technical research service
-

Uses

- Individual housing
- Housing
- Buildings
