

TNT ANTENNAS

TNT antennas let you receive TV programmes at multiple points in a home

Main Features

The TNT antenna makes it possible to receive TV programmes at multiple points in a home in the 470 to 790MHz frequency band using horizontal and/or vertical polarisation. We have ten types of TNT antennas to suit various technical needs, as well as a popular design.

Benefits

- The KOALA antenna has a futuristic design and excellent rear protection
- Triple-boom antennas offer maximum reception

Uses

- Individual housing
- Building
- Hotel
- Campsite
- Hospitals, retirement homes, prisons
- Cabled networks, housing
