

INDIVIDUAL CIBE ELECTRICAL CONNECTION BOXES

Complete line of boxes for making all the individual connections and the connection to the Low Voltage electrical network

Main Features

This range meets the needs of individual connections and makes it possible to have multiple network and connection configurations.

It consists of four enclosure types that accommodate customer connection protective electrical equipment with a single-phase or three-phase individual main circuit breaker (CCPI) and grids for the structure of the LV network with branching, connection, and false cut-off functions.

Four enclosure types:

- CIBE box
- Top CIBE box
- CIBE terminal of width 230 mm
- CGV (CIBE Large Volume) terminal

Advantages

- Enclosure diversity
- Connections for various connection configurations
- Security, IP2X electrical and mechanical protection
- Simplified implementation
- Respect for the visual surroundings

Uses

- Individual
- Residential
