

# CONNECTION SET IN A REMMO MODULAR DISTRIBUTION CABINET

---

**Creation of multiple network configurations (modular concept). Individual connections and a connection to the Low Voltage electrical network.**

---

## Main Features

This range combines all of the network functions at one point: breaking, protection, false cut-off, branching, single-phase branching, and triple-phase branching.

It is comprised of three enclosures of 300 – 450 and 600 mm. It accommodates busbar electrical equipment and connection modules.

The modular concept allows for a great combination of functions.

Solutions applicable to individual housing, concealed networks and small collective housing (up to 6 connections).

---

## Advantages

- Grouping and centralisation of enclosure functions
  - Configurability
  - Security, IP2X electrical and mechanical protection
  - Simplified implementation
  - Respect for the visual surroundings
- 

## Uses

- Individual
- Residential
- Small collective
