

WALL BRACKETS FOR CONNECTIONS

Brackets used to attach connection cables to a wall. Available in screw-in and tap-in formats.

Main characteristics

The recommended distance between each bracket is 30 to 50 cm.

They come in three versions: thermoplastic, plastic-coated steel and plastic-coated stainless steel.

The thermoplastic material is highly resistant to weathering, and the plastic-coated versions are recommended for insulation and corrosion protection.

Advantages

- High resistance to weathering
- Comprehensive range that covers cable diameter needs from 16 to 35 mm
- Compliant with HN 33S62

Uses

- Public distribution of electrical energy
- Renewable energies
- Public lighting
