

# WIRES AND CONNECTION END-FITTINGS

---

The connection end-fittings connect incoming cables to circuit breakers, meters and other devices. The wires create, for example, a link between measurement devices, a switch, etc.

---

## Main characteristics

There are two types of connection end-fittings:

- Insulation perforation connection end-fitting for an incoming cable
- Stripping connection end-fitting for an incoming cable

There are two types of wires: 16<sup>2</sup> and 25<sup>2</sup> with different lengths.

Two individual bypass kits for renovations.

---

## Advantages

- Range suitable for various connection types
  - Easy implementation
- 

## Uses

- Individual connection
- Collective connection
