

ELECTRICAL RISER BOXES – SPCM

Equipment used to distribute electrical energy in collective housing.

Main Features

This equipment serves three functions:

- Power supply to multiple columns
- Protection of an Indirect Metering System monitored power connection or general power supply services upstream of a column disconnection
- Energy distribution in buildings

Three types of equipment: 200A distributor circuit breaker, bypass and circuit breaker and common length distributors.

The ELIUM software lets you size out the structure and prepare the study file.

Benefits

- Protection of personal safety
 - Connection ergonomics
 - Consistent with distributor ranges
 - Same reduced size as distributors
-

Uses

- Collective
- Tertiary
