

ELECTRICAL COLUMN FOR COLLECTIVE EQUIPMENT - DISTRIBUTORS

Equipment used to supply electricity to customers living in collective housing.

Main Features

A comprehensive range of distributors for connecting different customers with electricity in collective buildings.

The distributors are installed in ducts inside of buildings, in a vertical or horizontal electrical column or grouped in a service room.

They offer protection to customers by means of an integrated circuit breaker (individual main circuit breaker) or an electrical connection to a high power customer (monitored power).

Two available powers: 200A and 400A.

The ELIUM software lets you size out the structure and prepare the study file.

Benefits

- Protection of personal safety
 - Faster implementation time
 - Connection ergonomics
 - Reduced size
 - Range consistency
-

Uses

- Collective
- Tertiary
