

JUNCTIONS AND DERIVATIONS

Complete range of underground cabling accessories for a network and connection structure.

Main characteristics

This range meets underground cabling needs to provide LV network junction or derivation functions or single or double derivation connection functions.

Insulation is provided by means of a filling resin. The corresponding connections are provided with accessories or provided separately.

There are two accessory methods: injected tape or rigid shell casting.

ISOL (neutral, not grounded) or NON ISOL (neutral, grounded) function

In addition to a range of junctions and derivations, CASTHORS offers industrial installations, public lighting and their corresponding connections.

Advantages

- Diverse range
 - Each connections
 - Simple implementation
-

Uses

- Low voltage urban and peri-urban network
