

DISCONNECTION AND PROTECTION BOXES – RISER BOXES

Equipment for disconnecting and protecting building connections – Novinter, 445, 446 ranges.

Main characteristics

This equipment is especially well suited for the collective distribution of electricity. It is attractive and blends into the surroundings perfectly.

The glass fibre reinforced polyester insulating enclosure features very good mechanical resistance (IK10) and resists corrosion, chemicals, UV and heat. It provides a double layer of insulation, which provides higher safety for the operator and others.

Depending on the required intensity, these boxes are equipped with 22x58, T00, T0 or T1 fuse holders.

They can therefore support connections of 35 to 150 mm² sections with an intensity of 80 to 250 A.

Advantages

- High resistance to weathering
 - Glass fibre reinforced polyester
 - Self-extinguishing material
 - IP 43, IK10
 - Network connections of up to 150mm²
 - Protections of 80 to 250A
-

Uses

- Public distribution of electrical energy
- Manufacturing
- Tertiary sector
- Renewable energies
- Public lighting
- Temporary installations
