

# Pillar Boxes

## FOR FIBER OPTIC SUBSCRIBER CONNECTIONS

CAHORS offers a wide range of SMC composite terminals for connecting optic fibre subscribers in pillar boxes.

These terminals are designed to accommodate connection equipment for Optical Connection Point subscribers. Moulded in SMC composite, these terminals protect the Optical Connection Point against external aggressions (resistance to shocks, to fire and extreme weather conditions, protection against deterioration and theft, etc.). These terminals were specially designed for connections in rural areas. With an optimised design in different colours, they blend perfectly into the existing urban setting alongside other energy networks (electricity, water and gas).

Example of product integration

### Benefits

- Very robust SMC composite material
- Excellent durability
- Very good heat and mechanical insulation
- Resistant to corrosion
- Ground anchors available
- Blends into the existing urban setting

### Custom solutions

We design, develop and manufacture custom products adapted to your needs, depending of the specification used on the TELECOM Network.

### > RANGE OF PILLAR BOX FOR FTTH DEPLOYMENT

	PB Small	PB Medium
Material of the enclosure	SMC Composite	SMC Composite
IP level	IP43	IP43
IK level	IK10	IK10
External dimensions W x H x D (mm)	295 x 680 x 140	350 x 1000 x 195
